<b>ABSTRACT</b>	
<b>ACKNOWLEDGEMENTS</b>	
<b>TABLE OF CONTENTS</b>	<b>i</b>
<b>TABLE OF TABLES</b>	<b>vii</b>
<b>TABLE OF FIGURES</b>	<b>xi</b>
<b>INTRODUCTION</b>	<b>I</b>
I.1. Motivations	I
I.2. Objectives	II
I.3. Contents and structure	III
I.4. Contributions	IV
<b>1. INTRODUCTION OF RAIL INFRASTRUCTURE CHARGES IN THE EUROPEAN UNION FRAMEWORK</b>	<b>1</b>
1.1. Reasons for introducing rail infrastructure charges in the European Union	1
1.2. Definition and strategic objectives of the charge for the use of rail infrastructure	4
1.2.1. Definition of the charge for the use of rail infrastructure	4
1.2.2. Strategic objectives of the rail infrastructure charge	5
1.3. Conception of the charge setting	6
1.3.1. Types of costs. Definitions	6
1.3.1.1. Fixed and variable costs	6
1.3.1.2. Total, average and marginal costs	7
1.3.1.3. Common and avoidable costs	9
1.3.1.4. Private, external and social costs	10
1.3.2. Charging principles and philosophies	11
1.3.2.1. Introduction. The marginal cost as reference point for charging	11
1.3.2.2. First best charging. Marginal cost charging	15
1.3.2.3. Second best charging. Charging above the marginal cost	17
1.3.2.4. Remarks on the different pricing principles	29
1.4. Charge for the use of rail infrastructure in the EU	32

1.4.1. Legislative framework	32
1.4.1.1. Directive 91/440/EEC	33
1.4.1.2. Directive 95/19/EC	35
1.4.1.3. Directive 2001/14/EC	36
1.4.2. Estimation of the charge for the use of infrastructure based on short-run social marginal costs and of the optimal mark up for high speed lines	43
1.4.2.1. Estimation and magnitude of social marginal costs for setting charges based on marginal cost: State of the art	44
1.4.2.2. Estimation of the charges for the use of the infrastructure based on short-run social marginal costs for high speed lines	50
1.4.2.3. Estimation of the optimal mark up above social marginal cost for high speed lines	53
<b>2. POSSIBLE INFLUENCES OF RAILWAY CHARGES ON THE DEVELOPMENT OF HIGH SPEED RAILWAYS IN EUROPE. FORMULATION OF THE PhD THESIS OBJECTIVE</b>	<b>55</b>
2.1. Introduction of the charge for the use of the infrastructure in the European Union: State of the art	55
2.1.1. Determination of the charge for the use of the infrastructure in the EU	55
2.1.2. Cost recovery rates	57
2.1.3. Pricing principles applied	60
2.1.4. Cost allocation in the charges for the use of infrastructure	62
2.2. Thoughts on the charge for the use of railway infrastructure introduced in the European Union countries	78
2.3. Intended research. Formulation of the PhD objective	79
<b>3. METHODOLOGY AND BASIC ASSUMPTIONS</b>	<b>81</b>
3.1. Approach and structure of the research	81
3.2. Modelling of the analysed network and definition of the competition framework	85
3.2.1. Definition of the geographical framework to be analysed	85
3.2.2. Modelling of the network to be analysed	85
3.2.3. Description of the competition framework	92
3.3. Methodology and assumptions for the calculation of the rail infrastructure charges applied to the European high speed network	92
3.3.1. Sources of information and tools available for the calculation of rail infrastructure charges in European railway networks	92

---

3.3.1.1. The Network Statements	93
3.3.1.2. Other documents on the charging of European rail infrastructure	95
3.3.1.3. The European Infrastructure Charging Information System: EICIS	95
3.3.2. Proposal of a methodology to calculate rail infrastructure charges	97
3.3.2.1. Documents used	98
3.3.2.2. Development of a database	99
3.3.2.3. Assumptions in the calculation of rail infrastructure charges for high performance services	101
3.3.2.4. Steps of the calculation procedure	104
3.4. Methodology and assumptions for the calculation of railways' revenues	105
3.4.1. Determination of the average ticket fare for railways	106
3.4.2. Determination of the load factor for railways	106
3.5. Methodology and assumptions for the calculation of charges and revenues for railways' main competitor: airways	109
3.5.1. Methodology and assumptions for the calculation of airways' charges	109
3.5.1.1. Assumptions related to the calculation of air charges	109
3.5.1.2. Assumptions related to the aircraft characteristics	112
3.5.2. Methodology and assumptions for the calculation of airways' revenues	113
3.5.2.1. Determination of the average ticket fare for airways	113
3.5.2.2. Determination of the load factor for airways	114
3.6. Assumptions to analyse the impact of a reduction/increase in rail infrastructure charges on traffic volumes	116
3.7. Assumptions to analyse the possible effects on the high speed market share resulting from a reduction/increase in rail infrastructure charges	118
3.7.1. Establishment of a link between infrastructure charges and rail ticket fares	118
3.7.2. Calibration of a market share model for European high speed links	119
3.7.2.1. Description of the model	119
3.7.2.2. Definition of the utility function	121
3.7.2.3. Case studies data used to characterise the utility function	122
3.7.2.4. Calibration of the market share model	125
3.7.2.5. Validation of the market share model for European high speed links	128
3.8. Outputs from the calculations of infrastructure charges and revenues	131

<b>4. ANALYSIS OF THE STRUCTURE AND VALUE OF RAIL CHARGES FOR THE USE OF RAIL INFRASTRUCTURE IN THE EUROPEAN HIGH SPEED NETWORK</b>	<b>133</b>
4.1. Introduction	133
4.2. Characterisation of the pricing systems in countries with high speed lines in operation	133
4.2.1. French rail infrastructure charging system	134
4.2.2. Spanish rail infrastructure charging system	140
4.2.3. German rail infrastructure charging system	144
4.2.4. Italian rail infrastructure charging system	150
4.2.5. Belgian rail infrastructure charging system	155
4.3. Summary of the main characteristics of the European pricing systems for high speed services in terms of the application of mark ups above marginal cost	159
4.4. Possible similarities in the application of mark ups above marginal cost for high speed services	166
4.4.1. Influence that the consideration of wear and tear cost by pricing systems may have on the value of charges for high speed lines. Mark ups based on wear and tear costs	168
4.4.2. Influence that the consideration of investment costs by pricing systems may have on the value of charges for high speed lines. Mark ups reflecting investment costs	171
4.4.3. Influence that the consideration of the market's commercial position by pricing systems may have on the value of charges for high speed lines. Mark ups reflecting commercial position	178
4.5. Comments on the value of rail infrastructure charges for the use of rail infrastructure in the European high speed network	185
<b>5. ANALYSIS OF THE LINK BETWEEN RAIL CHARGES FOR THE USE OF INFRASTRUCTURE AND RAIL REVENUES FROM TICKET SALES</b>	<b>187</b>
5.1. Interest of analysing the link existing between rail infrastructure charges and revenues from ticket sales	187
5.2. Analysis of the link between rail infrastructure charges and revenues from ticket sales	188
5.2.1. Weight of the infrastructure charges value for high speed links with regard to the revenues from ticket sales	188
5.2.2. Influence of the consideration of investment costs by pricing systems on the charges/revenues ratio	191

---

5.2.3. Influence of the consideration of the commercial position of the market on the charges/revenues ratio	195
5.3. Analysis of the charges-to-revenues ratio for high speed railways compared to the one for airways	200
5.3.1. Comparison of the charges-to-revenues ratio for railways and airways	200
5.3.2. Analysis of the influence that the consideration of investment costs by railway pricing systems may have on the competitiveness of high speed railways compared to airways	203
5.3.3. Analysis of the influence that the consideration of the commercial position of the market by railway pricing systems may have on the competitiveness of high speed railways with regard to airways	206
5.4. Comments on the link between rail infrastructure charges and revenues from ticket sales	207
<b>6. ANALYSIS OF THE IMPACTS THAT CURRENT PRICES CHARGED TO HS TRAINS ARE LIKELY TO HAVE ON HSR COMPETITIVENESS</b>	<b>209</b>
6.1. Introduction on the impact that the value of rail infrastructure charges may have on the railways competitive position	209
6.2. Analysis of the impact that a reduction in rail infrastructure charges can have on traffic volumes	211
6.2.1. Impact on traffic volumes resulting from a reduction of rail infrastructure charges to the level of marginal cost of maintenance and renewals	213
6.2.2. Impact on traffic volumes resulting from a reduction of rail infrastructure charges to the optimal level of mark ups	216
6.2.3. Comments on the impact that a reduction in rail infrastructure charges equivalent to reducing mark ups either to zero or to the optimal Ramsey mark up may have on traffic volumes	218
6.3. Analysis of the possible impacts on the mode split resulting from a reduction in infrastructure charges	222
6.3.1. Impact on mode split resulting from a reduction of rail infrastructure charges to the level of marginal cost of maintenance and renewals	225
6.3.2. Impact on mode split resulting from a reduction of rail infrastructure charges to the optimal level of mark ups	226
6.3.3. Comments on the impact that a reduction in infrastructure charges can have on mode split	228
<b>7. CONCLUSIONS AND FURTHER RESEARCH</b>	<b>235</b>
7.1. Summary and conclusions	235
7.2. Further research	244
